

### CONSULTATIVE SURVIVORSHIP CLINIC

- Care can be provided by MD, NP, or PA
- One-time visit with no follow-up, but has potential for another visit
- Ideal for providing treatment summary and care plan
- Can be implemented at a cancer center, community hospital, or private practice
- Communication and coordination with Primary Care

#### Advantages

- Comfortable for patients and family/caregivers who have developed a relationship with the treating oncologist
- Allows continuity of oncology care
- Requires few resources
- Provides a plan for post-treatment care and follow up
- Empowers patients with knowledge and education

#### Disadvantages

- One-time visit with no follow-up
- Limited time to address long-term and late effects
- Limited time to address and follow up on long-term psychological support
- Requires extensive knowledge across survivor groups
- Requires providers who can bill for services — not all types of providers may be reimbursed
