

SYSTEM – LEVEL CHALLENGES	
Barrier	Solution
Guidelines and Metrics	
<ul style="list-style-type: none"> There is a lack of standardized guidance and metrics for the assessment and management of long-term and late effects, modes of communication and medical record technology. 	<ul style="list-style-type: none"> Systems should engage in accreditation processes that support high quality survivorship care. Though not all measures may be feasible for some programs, the system of care should be required to respond to outcome measures, which are built into the program as it is developed.
Cancer Care Delivery Challenges	
<ul style="list-style-type: none"> Missing or insufficient support systems in place for transportation and/or paid time off work. These barriers affect survivors' ability to travel distances to reach a specialized follow-up care center or provider. The healthcare system requires independence and self-advocacy skills in order to effectively navigate care and secure services. Not all individuals are equipped with these abilities and skills 	<ul style="list-style-type: none"> Models of care should be patient-centered so that services provided are appropriate to the level of care required by the individual survivor. To help individuals navigate and access the healthcare system, outreach programs, resources and guidance can be strengthened, and satellite clinics, remote monitoring and telehealth can be explored to service remote areas. Develop outreach programs, resources, and guidance to assist community providers to provide long-term care for survivors of cancer.
Payment Models and Coverage	
<ul style="list-style-type: none"> Variation exists in insurance coverage for survivorship services. 	<ul style="list-style-type: none"> Advocacy for payment models that account for survivorship planning and services
